DETAILED ACTION

1. Applicant's election without traverse of Group IA, species Ic, tungsten for cathode, platinum for anode, water for electrolyte and the only reactive ingredient consumed by the reaction, metal hydride formed on an electrode which dissociates to form hydrogen atoms, and fusion pathway of $D + D = T + H.$, in paper No. 10. Is acknowledged. This election is in response to the Office Action dated February 25, 2002.
2. Following a telephone call by the examiner to the attorney for applicant advising that the elected electrolyte is inconsistent with the elected fusion pathway, the attorney indicated in a telephone reply on May 17, 2002 that the electrolyte election should be changed from water to deuterated water.
3. Upon further review of the application the examiner noted that there are additional species subject to election that were not covered in the 2/25/02 Office Action. As indicated in that Office Action, the application was filed under 35 U.S.C. 371 and the unity of invention requirement applies.
4. Accordingly, said 2/25/02 Office Action is modified to include the following election of species requirements. Any inconvenience to the applicant is regretted.

Election/Restrictions

4. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

D: The embodiment as shown in Fig. 1.

E: The embodiment as shown in Fig. 4.

F: The embodiment as shown in Fig. 5.

5. Upon election of one of the embodiments identified above as D-F, applicant is further required under 35 U.S.C. 121 to elect one of the following disclosed species of the applied voltage for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable (currently, claim 1 is generic). See, for example, the specification on page 2, 3rd full paragraph, and claim 9.

G: Wherein the voltage applied to the electrodes in the electrolyte is a constant or continuous DC.

H: Wherein the voltage applied to the electrodes in the electrolyte is provided at a switching frequency of up to 100 kHz

Art Unit: 3641

6. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rick Palabrica whose telephone number is 703-306-5756. The examiner can normally be reached on 8:00-4:30, Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 703-306-4198. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7687 for regular communications and 703-305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist, telephone number is 703-308-1113.
